AUTOMATION

The RiGt system uses data analytics to manage and automate most industry standard features included in the unit.

- NFC Profiles
  - Create automated series of actions for most dashboard functions
  - Conditions can be added to actions (ex: turn light on if morning, turn light off if evening)
  - Actions can be uniquely linked to users and NFC tags
- Automatic control of furnace, AC, vent fans, and waste heat generated from appliances via smart climate control system
- Lighting control management
  - Auto-dimming of lights based on time of day
  - Smart turn-on/off of lights from motion sensors
- Temperature profiles for thermostat
